

DIXER

Three-in-one multipurpose digger-smasher-mixer

Unique features:

The Dixer's six teeth-shaped blades are designed to smash hard lumps of material.

The lower blades can be used to dig out rock-hard sediment from the bottom.

The round-flat steel tip helps to protect the container from being damaged by the steel tool.

Use for one to five gallons buckets

China Patent: 201820939790.3, International patent pending

User's Guide

Read Completely Before Using

- 1, Tighten the chuck and drive shaft of the tool.
- 2, The Dixer MUST be fully immersed while in motion. Make sure that Dixer's sharp edges do not touch any part of your body.
- 3, Hold power tool and Dixer firmly. The material container should be properly secured so that its contents will not spill.
- 4, Submerge Dixer to within approximately one inch from the bottom of container. Turn on power and move Dixer around bottom area, and up and down, until settled material has been brought up.
- 5, Slowly move Dixer up and down and around in the material until contents are thoroughly mixed into a smooth, uniform body.
- 6, Clean Dixer after each use. Simply immerse in compatible solvent or water and run until clean. If the cleaning solution is flammable, be sure to remove Dixer from the power tool.
